

QS/1® WebRx™

QS/1's WebRx allows your customers to send electronic prescription refill requests from your public website to your QS/1 pharmacy system. Your customers can also go online to check their prescription status. WebRx provides a central management solution that allows you to manage your online refills for all your pharmacy locations. It also allows you to process multiple prescriptions and improves your pharmacy's overall workflow.

WebRx and Prescription WebServices™ Features

Pharmacy Workflow

- Automatically add online prescription refill requests to your filling queue
- Quickly and easily view prescription refill activity
- Reduce data entry time compared to phoned-in or faxed refill requests

Prescription Processing

- Submit multiple prescriptions simultaneously
- Automatically verify and validate prescription refill authenticity
- Check the pharmacy system for current status of prescription refill requests
- Ability to notify customers when prescriptions are ready to be picked up
- Refill reminder notification for compliance

Implementation

- Load programs and files with easy-to-use installation wizard
- Complete Programmer's Toolkit including samples for help in getting started
- The components, management site, and sample applications are Microsoft .NET-based, which provides a reliable and efficient platform

Efficient Management Interface

- Ensure security by requiring pharmacy employees to enter appropriate security passwords
- Easily add, update and delete users from the system
- See real-time listings of online refill activity by pharmacy location
- Manage online refills for an unlimited number of pharmacies
- Real-time support tools
